**EARNED VALUE MANAGEMENT APPLIED TO AN  
ENGINEERED-TO-ORDER MULTIPLE PROJECT  
ENVIRONMENT**

by

David Lincoln Fox

Master of Engineering (Research)

Supervisor: Associate Professor David Eager

Co-Supervisor: Dr Klaus Niebecker

Co-Supervisor: Mary Walmsley

31<sup>st</sup> December 2012

# CERTIFICATE OF ORIGINALITY

I certify that the work in this thesis titled “Earned Value Management Applied to an Engineered-To-Order Multiple Project Environment” has not previously been submitted for a degree nor has it been submitted as part of the requirements for a degree except as fully acknowledged within the text. I also certify that the thesis has been written by me. Any help that I have received in my research work and the preparation of the thesis itself has been acknowledged. In addition, I certify that all information sources and literature used are indicated in the thesis.

Signature of Student:

# ACKNOWLEDGMENTS

Fostering the academic ability of students in the engineering profession requires many years of mentoring coupled to a wealth of personal experience in the profession. Associate Professor David Eager has played a significant role in shaping my abilities in this field of practice, support that is greatly appreciated. Through his guidance and the capacity to visualise links between practical problems and theory he has provided the basis for planning and delivering this research. The academic elements of this research were moulded to the practical problems through the many discussions held with co-supervisors Mary Walmsley and Dr Klaus Niebecker, each bringing their own industry and research knowledge and insights into play whenever required.

Mention must be made of the assistance provided through the Commonwealth Governments Research Training Scheme program and UTS for its practice-based research opportunities, both essential elements that made it feasible for me to pursue this research.

The body of the research is indebted to L&A Pressure Welding Pty Ltd (LAP) for access to live project information and its business systems. Further acknowledgment needs to be directed to having the opportunity to implement changes to the organisation to test research outcomes and then document the experiences, this process created a unique learning environment that benefited both LAP and me personally. The most sincere thanks is due to Louie and Anne Chouaifaity, the owners of LAP. Their trust in me with their company's direction has been exceptional. Their continual encouragement and support must be regarded as extraordinary generosity and will always be remembered.

The final support element for this research is associated with family, my wife Liz has shown extended patience in managing the family and household while I became centred on my research. My children; Mathew (11), Vanessa (8) and Joseph (5) displayed remarkable restraint during the writing of this thesis. My parents also played a significant role, my mother assisted in juggling commitments with the children and my father for committing large amounts of time to proof reading material, discussing concepts and extracting chapter content for summarising. To my family there is a need to express immense appreciation.

# TABLE OF CONTENTS

<b>CHAPTER 1 .....</b>	<b>1</b>
<b>1 Introduction.....</b>	<b>1</b>
1.1 Background.....	1
1.2 Literature.....	2
1.3 Research Context .....	5
1.4 Research Focus .....	6
1.5 Research Frame.....	8
1.6 Method.....	10
1.6.1 System Development .....	10
1.6.2 Project Data.....	11
1.6.3 Application Process .....	12
1.7 Outcomes .....	13
1.7.1 System and Business.....	13
1.7.2 EVM Application.....	13
1.8 Chapter Summary .....	14
<b>CHAPTER 2 .....</b>	<b>16</b>
<b>2 Literature Review .....</b>	<b>16</b>
2.1 Small Medium Enterprise .....	16
2.2 Earned Value Management.....	18
2.2.1 History and Development .....	19
2.2.2 Private Industry Uptake .....	23
2.2.3 Schedule Analysis.....	24
2.2.4 Earned Duration (ED) .....	27
2.2.5 Earned Schedule (ES) .....	29
2.2.6 Planned Value Rate (PV Rate).....	32
2.2.7 Application.....	34
2.3 Project Modelling.....	38
2.3.1 Mathematical Modelling.....	40
2.3.2 Modelling and Management .....	43
2.3.3 The 'S' Curve.....	44
2.3.4 Indexes and Forecasting.....	46
2.3.5 Index Domains.....	47
2.3.6 Schedules Structure and Networks .....	48
2.3.7 The Scope of Modelling.....	49
2.4 Organisational Project Management.....	51
2.4.1 Project and Portfolio Management .....	51
2.4.2 Project Management Systems and the User.....	53
2.4.3 Managing Projects in Business .....	56
2.4.4 Structure and Processes.....	57
2.5 Chapter Summary .....	61
<b>Chapter 3 .....</b>	<b>65</b>
<b>3 Research Design .....</b>	<b>65</b>
3.1 Outline.....	65
3.2 Management-Orientated Activities.....	66
3.2.1 Context.....	66
3.2.2 Objectives .....	66

3.2.3	Questions.....	67
3.3	EVM Method .....	68
3.3.1	Project Type .....	69
3.3.2	Objectives .....	70
3.3.3	Questions.....	70
3.4	Development .....	71
3.4.1	Project Management Systems .....	72
3.4.2	EVM Adaption.....	75
3.4.3	EVM Trials .....	76
3.4.4	EVM Validation.....	79
3.4.5	System Simplification .....	80
3.4.6	Forecasting Strategies .....	83
3.5	Chapter Summary .....	84
<b>Chapter 4</b>	<b>.....</b>	<b>87</b>
<b>4</b>	<b>Application and Data.....</b>	<b>87</b>
4.1	Data Capture .....	87
4.2	Application Method .....	88
4.2.1	Project Work Book .....	89
4.2.2	Project Budget.....	89
4.2.3	Booked Hours .....	92
4.2.4	Material Costs .....	93
4.2.5	Schedule.....	97
4.2.6	Labour for the TPB .....	100
4.2.7	Time Phase Budget .....	103
4.3	Project Data Sets .....	108
4.4	Modelling Methods.....	112
4.4.1	Measurement Period (Frequency).....	112
4.4.2	Level of Detail (Granularity) .....	113
4.4.3	Performance Measures and Forecasting .....	113
4.4.4	Critical Path and Product Geometry .....	116
4.5	Chapter Summary .....	119
<b>Chapter 5</b>	<b>.....</b>	<b>121</b>
<b>5</b>	<b>Analysis and Results .....</b>	<b>121</b>
5.1	Preliminary Notes .....	121
5.2	General Observations.....	123
5.3	Project T001 – Review and Analysis.....	126
5.3.1	T001 – Trial Details .....	126
5.3.2	T001 – Labour, EVM and SV <sub>t</sub> Curves.....	127
5.3.3	T001 – IEAC <sub>t</sub> Forecasting .....	129
5.3.4	T001 – EAC Forecasting .....	133
5.4	Project T002 – Review and Analysis.....	136
5.4.1	T002 – Trial Details .....	136
5.4.2	T002 – Labour, EVM and SV <sub>t</sub> Curves.....	136
5.4.3	T002 – IEAC <sub>t</sub> Forecasting .....	138
5.4.4	T002 – EAC Forecasting .....	139
5.5	Project T003 – Review and Analysis.....	141
5.5.1	T003 – Trial Details .....	141
5.5.2	T003 – Labour, EVM and SV <sub>t</sub> Curves.....	142
5.5.3	T003 – IEAC <sub>t</sub> Forecasting .....	144

5.5.4	T003 – EAC Forecasting .....	144
5.6	Project T004 – Review and Analysis.....	146
5.6.1	T004 – Trial Details .....	146
5.6.2	T004 – Labour, EVM and SV <sub>t</sub> Curves.....	146
5.6.3	T004 – IEAC <sub>t</sub> Forecasting .....	149
5.6.4	T004 – EAC Forecasting .....	149
5.7	Project T005 – Review and Analysis.....	151
5.7.1	T005 – Trial Details .....	151
5.7.2	T005 – Labour, EVM and SV <sub>t</sub> Curves.....	151

# NOMENCLATURE

The content of this Nomenclature has been broken into two parts, **Part A** covers the acronyms relating to general text while part **Part B** specifically deals with the terms associated with Earned Value Management.

## **Part A – General Text**

ANSI	American National Standards Institute
AS	Australian Standards
AUD	Australian Dollar
DoD	(US) Department of Defense
DoE	(US) Department of Energy
EIA	Electronic Industries Alliance
EPCM	Engineering Procurement and Construction Management
ERP	Enterprise Resource Planning (software tool)
FI	Final Inspection
GFC	Global Financial Crisis (2008)
FAR	Federal Acquisition Regulation
Host	L&A Pressure Welding Pty Ltd
IPT	Independent Product Team
KPI	Key Performance Indicator
LAP	L&A Pressure Welding Pty Ltd
LNG	Liquefied Natural Gas
LPG	Liquid Petroleum Gas
MBWA	Management By Walking Around
NASA	(US) National Aeronautics and Space Administration
NDIA	(US) National Defence Industrial Association
N/A	Not Available
OMB	(US) Office of Management and Budget
OPM3	PMI's Organisational Project Management Maturity Model

PE	(LAP) Project Engineer
PMI	Project Management Institute
PMS	Project Management System
PPM	Project Portfolio Management
PWHT	Post Weld Heat Treatment
SME	Small to Medium Enterprise
US	United States of America
wrt	‘With Respect To’
~	Approximately

### **Part B1 – Earned Value Management**

AC	Actual Cost
AD	Actual Duration
AT	Actual Time
BAC	Budget at Completion
CAP	Control Account Plan
CPI	Cost Performance Index
C/SCSC	Cost / Schedule Control Systems Criteria
CV	Cost Variance
EAC	Estimate at Completion
EAC <sub>t</sub>	Estimate at Completion (time)
EAC <sub>#</sub>	Estimate at Completion (general term)
ED	Estimated Duration or Earned Duration, as text suggests
EDAC	Estimate of Duration at Completion
ES	Earned Schedule measure
ETC	Estimate to Completion
ETC <sub>t</sub>	Estimate to Completion (time)
EV	Earned Value

EVM	Earned Value Management
IEAC <sub>t</sub>	Independent Estimate at Completion (time)
IEAC <sub>#</sub>	Independent Estimate at Completion (general term)
IECD	Independent Estimate of the Completion Date
IED	Independent Estimate of (project) Duration
IEDAC	Independent Estimated of Duration at Completion
LB	Labour Budget
LO	Labour Only
LOE	Level of Effort
MR	Management Reserve
PB	Project Budget
PBB	Project Budget Base
PD	Planned Duration
PDWR	Planned Duration for Work Remaining
PERT	Project Evaluation and Review Technique
PF	Performance Factor
PMB	Performance Measurement Baseline
PT	Planned Time
PV	Planned Value
SAC	Schedule at Completion
SPI	Schedule Performance Index
SPI <sub>t</sub>	Schedule Performance Index (time)
SPI <sub>#</sub>	Schedule Performance Index (general term)
SV	Schedule Variance
SV <sub>t</sub>	Schedule Variance (time based)
TCPI	To Complete Performance index
TEAC	Time Estimate at Completion
TPB	Time Phase Budget

TSD	Total Scheduled Days
TSPI	To complete Schedule Performance index
TV	Time Variance
VAC	Variance at Completion
$VAC_t$	Variance at Completion (time)
WBS	Work Breakdown Structure
WDC	Work Description Cell(s)
WP	Work Package

# ABSTRACT

The supply of Engineered-to-Order pressure equipment in Australia has established a place in the global market. Local manufacturing requires innovation to maintain its position in this supply chain. Changes at the manufacturing level looked to project management to connect the end product's development and delivery with the end user's needs. Earned Value Management (EVM) offers project management a best practice in project control and its application to this niche market was considered worthy of investigation as a response to market changes.

EVM has a long history of application in large and complicated projects. This provided researchers with material to study application detail across the cost and time domains, resulting in well-established theories about performance outputs and forecasting. EVM implementation has also been the subject of research offering guidance to the user. An area of EVM that remains in the background is the application, implementation and benefits of the method in the smaller manufacturing sector. This research applies EVM to a project orientated organisation that designs and manufactures customised pressure equipment. The objective of this practice-based research is to address questions of EVM application, implementation and benefits when applied to a multiple project environment set within an operations context.

A series of twelve projects carried out by the host organisation were subject to EVM application. This provided data to assess the response of EVM to the short duration project and to explore various forecasting behaviours from both the cost and time domains under different reporting frequencies. The process of application was also used to establish qualitative information on implementation and organisational effects as a result of the methods presence.

Results indicated EVM is adaptable to the sampled manufacturing projects and tracking capabilities were positive on the few larger projects in the sample. Net benefit to the internal project management function is not represented by EVM tracking, when restricted to the short duration project. Forecasting of both cost and time was adversely affected by high material costs, but displayed stability after this project phase. Exclusion of materials

simplified application by reducing administration effort however it did exaggerate deviation of progress from the plan.

High project and organisational value is realised by access to EVM's data sources and structure. It was therefore concluded EVM methodology, coupled to organisational project management and business system theories can deliver substantial operational gains for the project orientated manufacturer.
